Methodology

Participatory approach will be adopted throughout the course comprising of:

- **Lecture Discussions:** Each lecture session of one hour time will be followed by discussion and interaction with the participants.
- **Case Studies:** Sample case studies will be discussed.
- **Group Work:** The participants will be divided into groups and given an area for discussion and preparation of an action plan.
- **Field Visits:** The participants will be taken to field visits to a PSU/factory to give them an understanding of workplace/environmental exposures and their hazards.

Participants will be given an opportunity to share issues related to their respective organizations.

**About the Institute**

The National Institute of Health & Family Welfare is a premier autonomous Institute, funded by the Ministry of Health and Family Welfare, Government of India. It has kept pace with the new thinking and substantially contributed to the health manpower development in the country.

NIHFW serves as an apex ‘technical institute’ as well as a ‘think tank’ to promote national health and family welfare programmes in the country through education and training, research and evaluation, consultancy & advisory services, specialized projects, etc.
Introduction

The Health hazards/diseases associated with occupational and environmental exposures contribute significantly to overall burden of diseases. Most of the occupational and environmental diseases are being missed out in the diagnosis in the present health care system due to marginalization of this discipline. The health professionals and the community generally do not understand, and appreciate the consequences of harmful exposures to hazards in work place as well as in general environment. There is an urgent need to focus on hazard identification, hazard analysis, assessment and control of hazards causing such disease. The World Health Organization has repeatedly called upon health professionals to develop interest in tackling physical, chemical, biological & psychological hazards that account for substantial disease burden. In the absence of adequately trained manpower, measures to prevent and control such illness are not instituted in many countries including India. Health professionals need to be trained to keep a watch on the exposed groups for conducting surveillance of work/home environment, and early detection of occupational/environmental illness. Present training course will try to sensitize the health professionals in the area of occupational & environmental health.

Specific Objectives

This course will prepare the participants to:

- Describe importance of occupational diseases associated with physical, chemical, biological and psychological hazards.
- Describe epidemiological principles concerning Occupational & Environmental health.
- Describe cumulative trauma disorders and ergonomics concerning Occupational health.
- Explain adverse health effects of environmental contaminants in individuals and/or populations.
